Database-driven output management system designed to manage, track and report on jobs through production workflows from onboarding to final delivery.

Output management solution combining integrated connectivity with fast, accurate print stream conversions and job routing & tracking capabilities.

Optimises fonts, images, objects, colours and resources to allow PDF files to process more efficiently for production printing, ePresentment and archiving.

Allows print job submission through a secure bi-directional channel for communicating with printers using encrypted pathways that help ensure your print data stays secure.

Powerful AFP transform engine that routes mainframe and AS/400 print reports directly to network and production PostScript printers, viewing stations and archive systems.

Automates production tasks such as external processes & scripts, indexing PDF documents, and executing Rubika configurations.

Post-composition re-engineering solution to automate manual processes, enable postal savings, add value to documents, and dynamically modify print data.

ePresentment & archive solution designed to index, store, search and retrieve large collections of transactional and scanned documents.

Powerful PDF indexing tools to design, test and manage indexing templates for data extraction, accessibility tagging & redaction.

Emulates and optimises Xerox VIPP® software, extending the reach of VIPP applications to virtually all types and brands of production printers and archive systems.
